

Problem Statement:

This purpose of this project is to carry out a detailed analysis and visualization of death causes across the globe using the 'Death Cause Reason by Country' datasets. The dataset can be found [here](#)

Introduction

The key points to consider are as follows:

- Total number of deaths per cause across the globe
- Analysis of the leading cause of death
- Analysis of the top 25 countries with the most recorded deaths from the leading cause

```
In [1]: import numpy as np
import pandas as pd
from wordcloud import WordCloud

import matplotlib.pyplot as plt
import seaborn as sns
from PIL import Image

import warnings
warnings.filterwarnings("ignore")
```

```
In [3]: df = pd.read_csv("Death Cause Reason by Country.csv")
pd.set_option('display.max_columns',50)
```

Death causes by country EDA and Stats

```
In [4]: df.describe()
```

In []:

Let's make some visualizations

TOP 20 countries for affected mostly by each disease

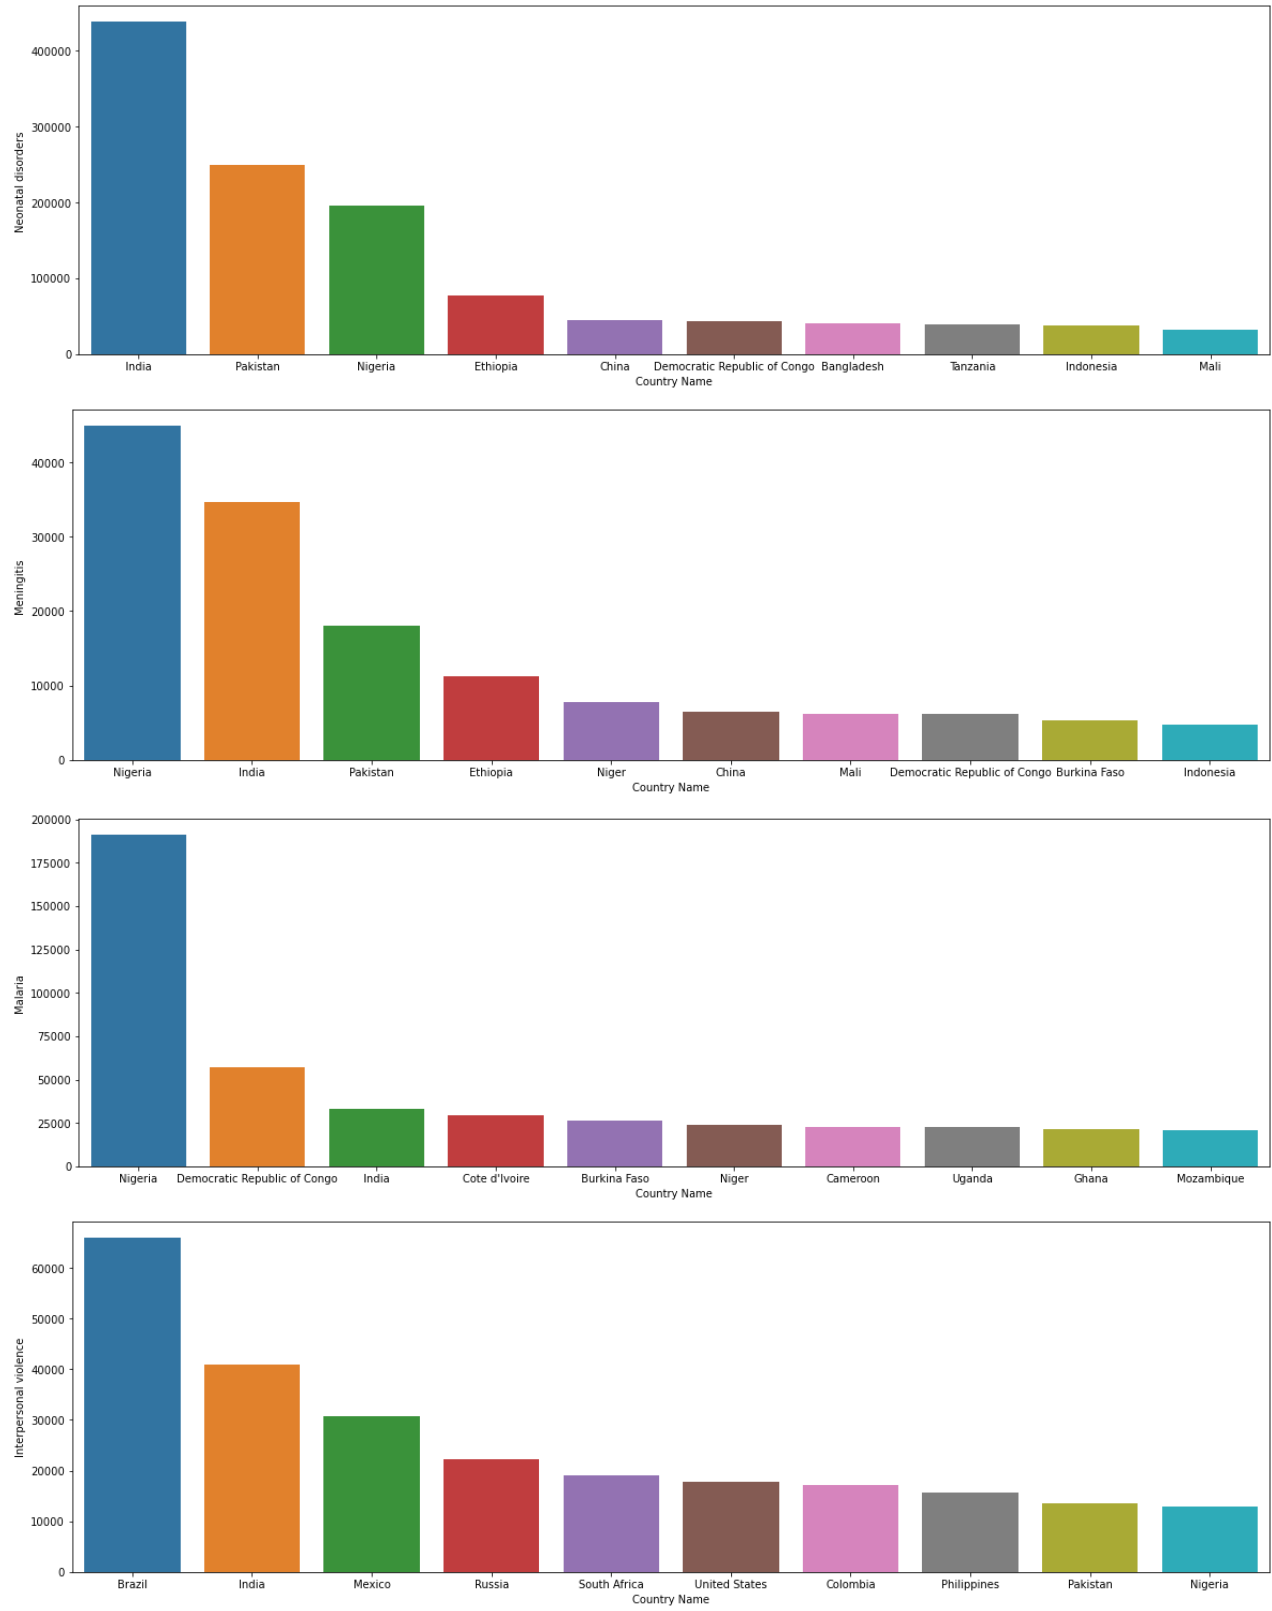

In [18]:

```
#BarPlot
for cause in causes[:11]:
    f = plt.figure(figsize=(20, 6))
```

```
sns.barplot(x = "Country Name", y = cause, data = causes_10[cause])
```

```
gs = f.add_gridspec(6, 6)
f.tight_layout()
```

```
In [21]: words = ''
for i in list(df["Country Name"]):
    i = i.replace(" ", "_") + " "
    words+= i

wordcloud = WordCloud(background_color='white',
                        max_font_size = 25,
                        random_state = 55,
                        mask = np.array(Image.open('loc.png'))
                        )

wordcloud.generate(str(words))
plt.figure(figsize=(15,12))
plt.title("Countries in the world", fontsize= 30, x=0.5, y=1.1)
plt.axis('off');
plt.tight_layout()
plt.imshow(wordcloud);
```

A word cloud of 193 country names, where the size of each word represents the country's population. The words are arranged in a circular pattern, with the most populous countries like China, India, and the United States being the largest. The colors of the words are random, and the background is white.

Let's show the top 10 countries that have the greatest number of deaths due to given disease.

```
In [22]:  
def my_autopct(pct):  
    return ('%.2f' % pct) if pct > 5 else ''
